Research Area – Predictive Analytics

Predictive Analytics has brought revolutionary changes in many fields. The application areas such as Banking, Education, Sports, Manufacturing, Agriculture, Government, Transportation, Media and Entertainment are the ones that extensively make use of Predictive Analytics. The extraction of Knowledge from data is the most challenging job as the data stored is of different types such as audio, video, text, images and so on. Predictive Analytics is a complex method of exploring big datasets to reveal hidden patterns or unknown relationships, the analysis of which will enable an organization in the decision-making process. It has brought revolutionary changes in many fields of Information Technology. Data contains datasets that are of type audio, video, text, customer transactions, activity logs of users on the social networking sites etc. The data gathered is to be analyzed by using algorithms and has to be converted to required information which can be used for further analysis to arrive at a conclusion or to make a decision. Predictive Analytics is an emerging technology and most of the applications make use of the same in the process of decision making.

Objectives:

The goal of this research centre is to analyze the existing applications in the field of Big Data Analytics and proposing new algorithms to perform Data Analytics.

- To familiarize tools and languages required for Predictive Analytics
- To study the existing solutions and their applications
- To comprehend the use of Predictive Analytics to other emerging technologies
